

A.P. Calculus AB Student Manual

www.mastermathmentor.com

This manual was developed for a typical Advanced Placement Calculus course by Stu Schwartz over the years 1998 - 2005. The student manual is free of charge and may be copied. Your free downloads may be copied for purposes of in-class instruction. The manuals and solution manuals may not be altered in any way in the copy process.

Graphics in this manual were produced from:

1. Texas Instruments 84 Graphing Calculator.
2. InTaglio TM software. Intaglio@PurgatoryDesign.com.
3. Equation Editor Software for the Mac. © Design Science Corp.
4. Grapher Software: © Apple Computer Corp.

Thanks to my partner Ted Tyree for his unwavering support in all of my projects and his monumental work in bringing my materials free to anyone who wants them through the Internet. Thanks also go to Sam Tsui (Yale University) for developing the www.mastermathmentor.com logo on the cover and to Kurt Schneider (Yale University) for helping me through some sticky math problems. Finally, my appreciation goes to all of my students who pointed out enough errors to make me glad I am semi-retired.

If you do find errors or have any questions or comments, please direct them to: team@mastermathmentor.com.

Table of Contents (AB Calculus)

Below are all the topics we will cover in this course. Each topic will have a classwork section where we will work out problems in class and you will take notes. Each section will also have a homework section containing many types of problems you will see on exams and on the A.P. Test.

	Topic	CW Page	HW Page
	Introduction	0	
1	Tangent Lines	10	12
2	Slopes of Secant and Tangent Lines	14	19
3	Graphical Approach to Limits	22	25
4	Finding Limits Algebraically	28	30
5	Definition of Derivative	32	33
6	Derivatives Using Technology	34	
7	Techniques of Differentiation	36	39
8	Differentiation by the Chain Rule	42	44
9	Differentiation of Trig Functions	47	50
10	Implicit Differentiation	51	53
11	Continuity and Differentiation	55	59
12	Related Rates	63	67
13	Straight Line Motion	75	79
14	Rolle's and the Mean Value Theorem	82	84
15	Function Analysis	86	95
16	Finding Absolute Extrema	102	103
17	Newton's Method of Roots (*)	104	105
18	Approximation Using Differentials (*)	106	107
19	Optimization Problems	108	111
20	Economic Optimization Problems	115	117
21	Indefinite Integration	120	124
22	u-Substitution	126	128
23	Sigma Notation	130	132
24	Area Under Curve	133	
25	Riemann Sums	135	139
26	Exact Area Under a Curve (*)	140	142
27	Definite Integral as Area	143	145
28	Accumulation Function	147	150
29	Fundamental Theorem of Calculus	154	156
30	Definite Integration with u-Substitution	157	158
31	Straight Line Motion Revisited	160	162
32	Average Value/2nd Fundamental Theorem	163	165
33	Area of Region Between 2 Curves	167	169
34	Volume by Disks and Washers	171	176
35	Volume by Cylindrical Shells (*)	180	182
36	Review of Exponentials and Logarithms	183	186
37	Differentiation of the ln function	189	191
38	Integration and the ln function	193	194
39	Derivatives and Integrals with "e"	195	198
40	Inverse Trig Functions	201	205
41	Integration and Inverse Trig Functions	207	108
42	Derivatives of Inverse Functions	209	211
43	Differential Equations by Separation of Variables	212	213
44	Slope Fields	214	215
45	Exponential Growth	216	218
46	Exponential Growth Continuation	221	222
47	Taking "Impossible" integrals	224	224
48	L'Hopital's Rule for Indeterminate Forms (*)	225	226
